

Incident handler's journal

Date: 03/09/2025	Entry: 1
Description	A small U.S. based health care clinic experienced a security incident.
Tool(s) used	None.
The 5 W's	Capture the 5 W's of an incident. • Organised group of unethical hackers • Ransomware security incident • The incident occurred on Tuesday at 9am. • Occurred on-premise at the U.S health care clinic • The attackers used a phishing attack to gain access into the company's system. Employees opened a phishing email which downloaded malware onto the computer, encrypting company files when opened. This disrupted the normal business operations and the company had to shut down the devices and network. The attackers left a ransom note demanding money in exchange for a decryption key.
Additional notes	• Provide security awareness training to employees • Should the company pay the ransom to return to normal business operations?
