

Incident report analysis

Summary	Experienced a DDos attack which compromised the internal networks for two hours.
Identify	The cybersecurity team found that a malicious actor had sent a flood of ICMP pings into the network and an unconfigured firewall, overwhelming the network.
Protect	To prevent a recurring attack, the team implemented a new firewall rule to limit the rate of incoming ICMP packets, source IP address verification on the firewall to check for spoofed IP addresses on incoming ICMP packets. Networking monitoring to detect anomalies and an IDS/IPS to alert of any suspicious activity
Detect	To detect any suspicious incoming traffic, the firewall will use IDS/IPS to alert and stop suspicious ICMP packets.
Respond	Isolate affected systems in the future
Recover	Restore to previous baseline
